

Run the whole operation in one place.

Skyway Ops is the Part 135 charter operations platform built around a single operating day: live fleet tracking, dispatch, crew duty and rest, passenger manifests, maintenance, company email and Microsoft Teams, and QuickBooks accounting — for the whole team, on any device.

Fleet

Every aircraft, always located

Duty

14-hour clock, live

HOW IT WORKS

One operating day, one system of record

The schedule drives everything. Each step below writes to the same trip record, so dispatch, crew, brokers and accounting are never looking at different versions of the day.

1

Schedule arrives

Trips import from your scheduling feed. Aircraft, route, crew and passengers land on one trip record.

2

Dispatch readies the leg

Trip sheet, FBOs, catering and passenger manifest are completed and checked against a readiness list.

3

Crew works the trip

Pilots go on duty, scan passenger IDs, and tap each milestone from crew on-site through landed.

4

Everyone sees it live

FlightAware positions and status steps update the fleet map, the flight board and the broker tracking link at the same time.

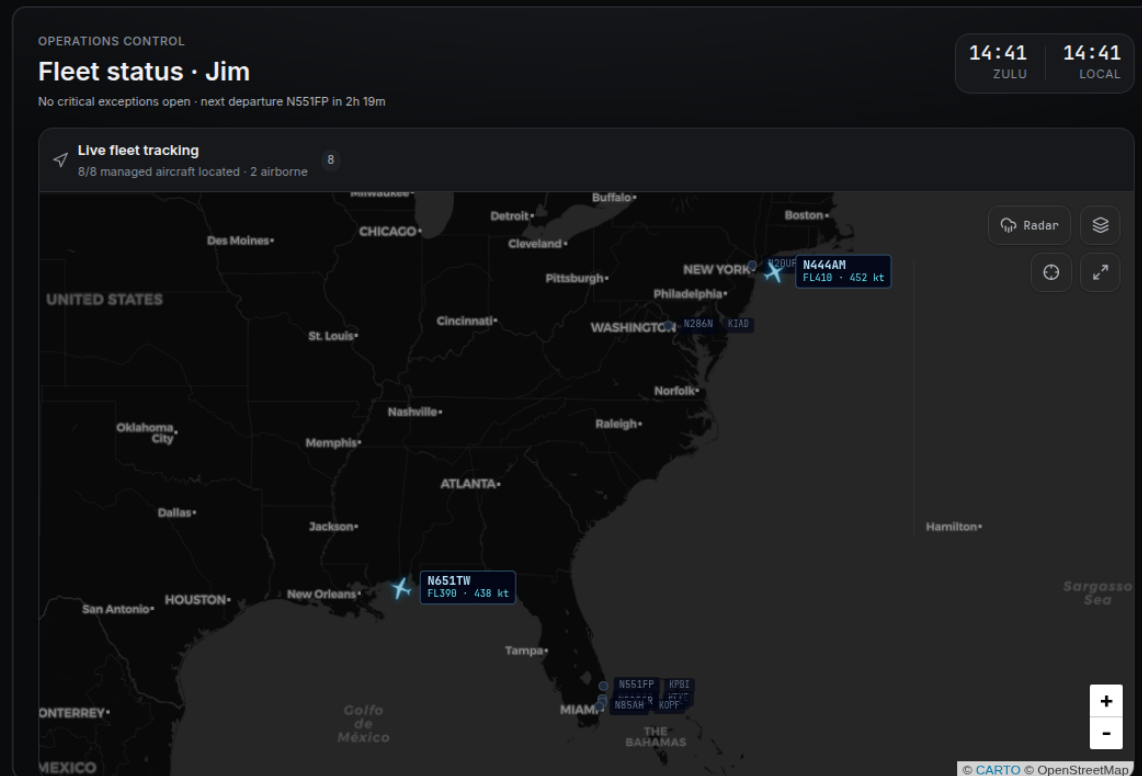

5

The day settles

Duty and flight time are recorded for compliance, expenses match to card charges, and invoices post to QuickBooks.

Every aircraft, always on the map

Airborne aircraft show live position, altitude and speed. Aircraft on the ground show where they actually are — so the fleet is never partly invisible.

- **Airborne from ADS-B**
Live FlightAware position, altitude, ground speed and progress, refreshed continuously.
- **On the ground, still shown**
Parked aircraft sit at their last landing airport. If the position feed gaps, the last known point is kept rather than dropping the aircraft off the map.
- **Whole managed fleet**
Tracking follows the fleet you configure in Settings. Add a tail and it appears — no deployment needed.
- **One shared feed**
Positions are polled once for the company rather than once per browser, so tracking cost stays flat as the team grows.

Today's flights, and what actually happened

The whole day in departure order, with live status and scheduled block time compared against real airborne time.

Today's flight board				
Schedule and live FlightAware status				
TIME	TAIL	ROUTE / CREW	STATUS	SCHED / ACTUAL
8:00 AM	N286N	TVC → IAD Cade Kaftel / Jenelle Szelest	Complete	2:12 / 1:24
9:00 AM	N444AM	IAD → HYA Maxwell Hagberg / Timothy Woods	Airborne	2:06 / 1:14
11:30 AM	N651TW	APF → DFW Melissa Rippy / Andre Cole	Airborne	2:54 / 0:51
1:00 PM	N20UF	TEB → PBI Dana Whitfield / Grant Ellis	Preflight	2:48 / -
2:30 PM	N444AM	HYA → TEB Maxwell Hagberg / Timothy Woods	Delayed	1:24 / -
5:00 PM	N551FP	PBI → OPF Rosa Delgado / Kyle Brenner	Scheduled	0:54 / -
6:30 PM	N168ZZ	FXE → MDW Victor Alvarez / Nina Park	Scheduled	2:54 / -
8:00 PM	N525CR	FLL → CHS Ian McPherson / Bree Coleman	Scheduled	1:36 / -

- **Status that reflects reality**
Complete, airborne, preflight, delayed or scheduled — derived from crew milestones and live aircraft position together, not from the calendar alone.
- **Scheduled versus actual**
Each leg shows planned block time next to actual airborne time from FlightAware, so padding and schedule creep become visible.
- **Crew on every leg**
PIC and SIC are shown inline, and a leg with no assigned captain is raised as an exception before it becomes a problem.
- **One tap to the trip**
Selecting a row opens the full trip: manifest, trip sheet, FBOs, filed email and status history.

Who is on duty, and how much clock is left

Part 135 duty tracking sits next to the flight board, so the question "can this crew take the leg" is answered without opening anything.

 Pilots currently on duty 4 14-hour duty clock - scheduled versus FlightAware airborne time				
PILOT	DUTY ON	TIME LEFT	AIRCRAFT	FLIGHT SCHED / ACTUAL
Dana Whitfield PIC - 1 scheduled leg	2:35 AM	1:36	N20UF	2:48 / - FlightAware airborne
Maxwell Hagberg PIC - 2 scheduled legs	10:59 AM	10:00	N444AM	3:30 / 1:14 FlightAware airborne
Timothy Woods SIC - 2 scheduled legs	10:59 AM	10:00	N444AM	3:30 / 1:14 FlightAware airborne
Melissa Rippy PIC - 1 scheduled leg	12:29 PM	11:30	N651TW	2:54 / 0:51 FlightAware airborne

- 14-hour duty clock**
 Every pilot on duty shows when they went on duty and the time remaining, turning amber as the limit approaches and red once exceeded.
- Assigned aircraft recorded**
 The tail a pilot is flying is captured on the duty record automatically at duty-on and kept for the whole period.
- Scheduled versus flown**
 Planned flight time is compared with actual airborne time, so a duty day that is running long is obvious early.
- Built for the audit**
 Duty, rest, flight time, overrides and who changed what are all retained and exportable for the FAA.

The charter inbox, inside the operation

Your Microsoft 365 mail — the shared charter inbox and each employee's own mailbox — without leaving the app or losing the trip context.

Re: AVL - DFW on 08/12 - 4 pax, catering requested
Confirmed on the 4 pax and the crew car. Client asked for a fruit and cheese tray plus two vegetarian entrees.

Melissa Rippey 2:00 PM
Aircraft Ready for Passengers — N444AM IAD-HYA
The aircraft is now ready for your passengers as of 12:24 PM EDT. We will advise once they have checked in.

Jenelle Szelest 11:55 AM
Trip sheet + passenger manifest for tomorrow
Attaching the signed trip sheet and manifest. Two passengers are new — IDs will be scanned at the FBO.

Truist Treasury Alerts 9:55 AM
Wire Payment Confirmed Alert
A wire transfer of \$48,250.00 has been confirmed for charter invoice 1042.

Victor US Flight Management 7:55 AM
FXE - MDW quote request, 5 pax, Thursday
Looking for a light jet, 5 passengers, departing FXE around 14:00 Thursday returning Sunday evening.

Team,

Confirmed on the 4 pax and the crew car at DFW. Client asked for a fruit and cheese tray plus two vegetarian entrees.

Quote attached — please confirm the tail assignment when you have it.

Cade Kaftel
VP, Charter Sales
Monarch Air Group

- Shared and personal**

One shared charters@ inbox for the sales desk, plus each employee's own work mailbox. Sign in once with Microsoft.

- File mail to the trip**

Attach a message to a trip and the whole conversation follows it, so the next person sees the history.

- Full Outlook actions**

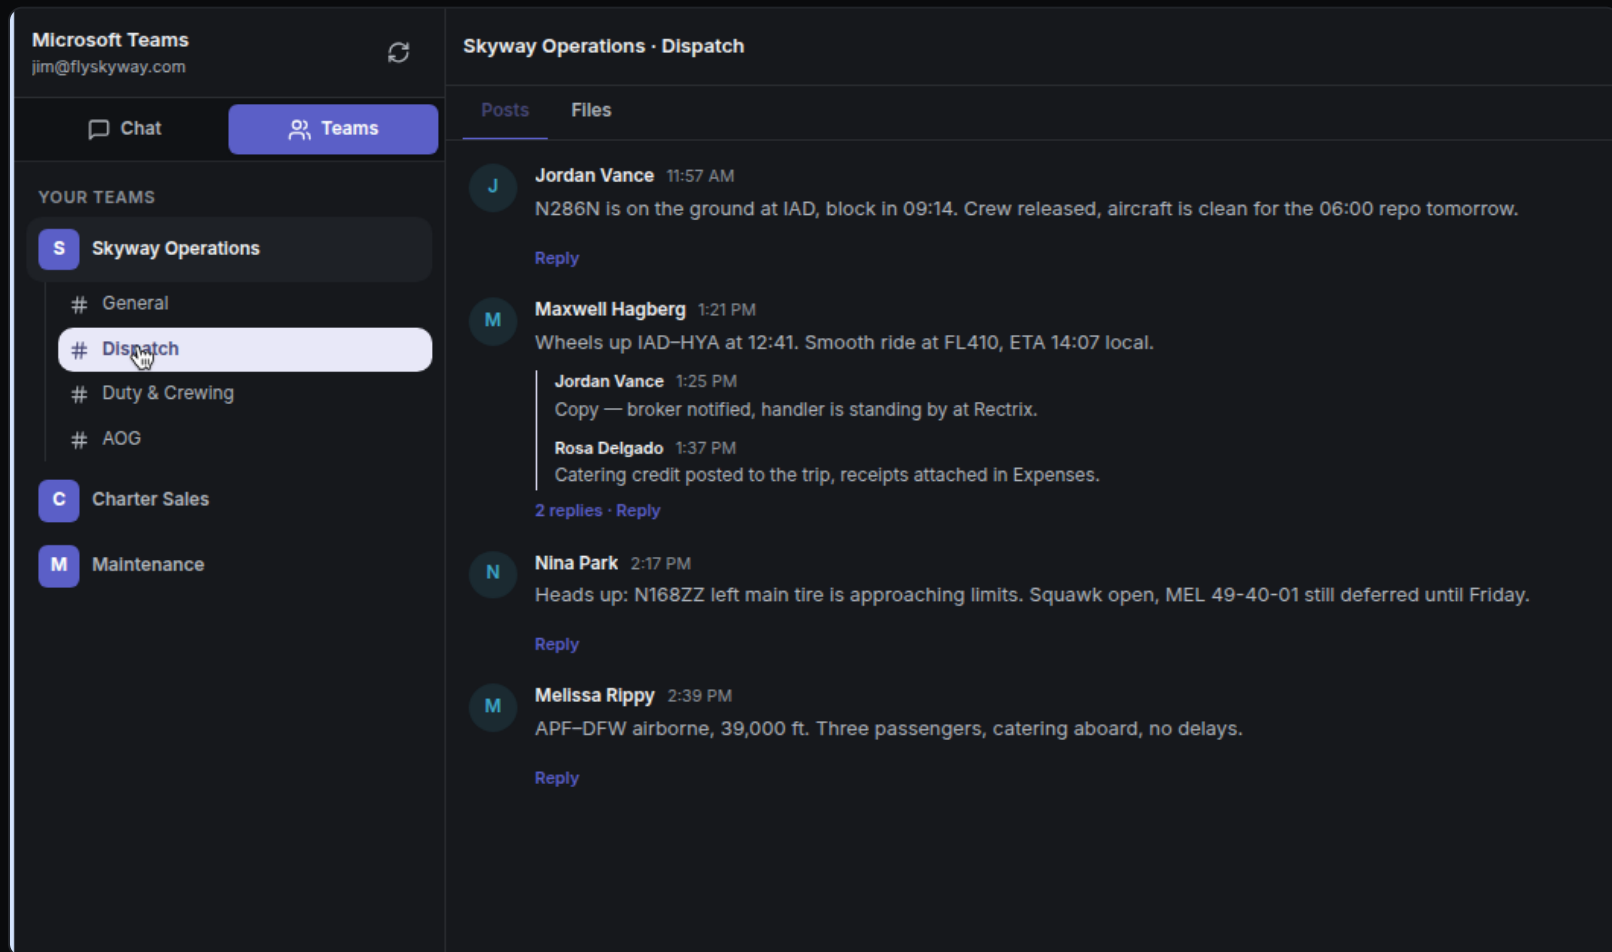

Reply, reply-all, forward with attachments, Cc and Bcc, folders, search, flags and recipient autocomplete.

- Mail stays in Microsoft**

Nothing is copied into a second mail store. Skyway reads and sends through Microsoft Graph as you.

Dispatch conversations where the work is

Teams channels, threaded replies and chats alongside the flight they are about — with channel files opening in Microsoft 365.

- **Channels and chats**

The teams and chats you already use, read and answered from inside the operations app.

- **Threaded replies**

Reply in-thread on a channel post so a dispatch decision keeps its context.

- **Channel files**

Browse channel files and open them in the real Microsoft 365 editor, with coauthoring and version history intact.

- **Acts as the signed-in user**

Delegated access only: each person sees exactly the conversations they can already see in Teams.

Invoices and receivables against live books

A/R aging, invoicing, payments and customers driven directly by the connected QuickBooks Online company.

- **Real A/R aging**

Current through 90-plus days late, computed from the invoices actually in QuickBooks.

- **Invoice and collect**

Create an invoice from your products and services, email it through QuickBooks, and record the payment to a deposit account.

- **Expenses that reconcile**

Crew receipts match to posted company-card charges; personal spend becomes a reimbursable bill.

- **No second ledger**

Everything posts through the QuickBooks API to the live company file, with normal audit history.

Built for a company that has to prove things

Charter operations carry compliance and privacy obligations. The platform is designed around who may see what, and around leaving the record intact.

Microsoft sign-in only

Access requires a company Microsoft account. A new identity gets no access until an administrator approves it.

Roles, not honour system

Crew, dispatch, maintenance, accounting and administrators each see their own scope, enforced on the server as well as the screen.

Passenger data handled carefully

Broker tracking links are token-gated and time-limited, and never expose passenger names, pricing or crew contact details.

Duty and rest on the record

Part 135 duty periods, rest, flight time and overrides are captured with an audit trail and exportable for the FAA.

Works on the ramp

Installs on an iPhone as an app, survives poor signal, and keeps working when a service it depends on is briefly unavailable.

Your systems stay yours

Mail and Teams remain in Microsoft 365 and the books remain in QuickBooks. Skyway connects to them; it does not replace them.

One operation. One workspace.

Every screen in this document is the working product, rendered from the shipping application against a sample operating day. Aircraft registrations, crew names, brokers, passengers and dollar figures are invented for illustration.

- Live fleet tracking with ground positions
- Part 135 duty, rest and flight-time records
- Maintenance squawks, MEL and AOG recovery
- QuickBooks invoicing and expense matching
- Dispatch readiness and today's flight board
- Passenger manifests and ID check-in
- Microsoft 365 email and Teams
- Broker-facing live tracking links
